

Artificial Intelligence Engineer (m/f/d)

We believe that the future of tradable assets is digital. As a growing software company from Graz, we build a regulatory conform Digital Asset Management System for financial institutions. Our customers are banks and brokers who follow the rapidly growing interest in digital asset trading. Together with our ambitious team, you can influence our mission with your skills and ideas. We are growing! Grow with us!

The work you will do

You will be part of our mission to build an AI-based Digital Asset Agent that revolutionizes pricing computation, order execution, and fund management in a heterogeneous environment. You leverage the power of AI, and participate in the full AI lifecycle (data exploration, data cleansing, model implementation, training, scoring, validation, and deployment), and lead a small project team. In addition, to ensure the success of the project, you will conduct research and keep up-to-date with the latest developments in AI.

Our stack

AWS SageMaker, Python and Tensorflow

Who you are

You should hold a Bachelor's or Master's degree in Computer Science, Engineering, or a related field, and have a proven track record in developing and implementing AI algorithms and models. Strong proficiency in Python programming, experience with popular AI frameworks, and a solid understanding of statistical modeling, data analysis, and preprocessing techniques are essential. Excellent problem-solving skills, the ability to work independently and collaboratively, and effective communication skills are also important for success in this role.

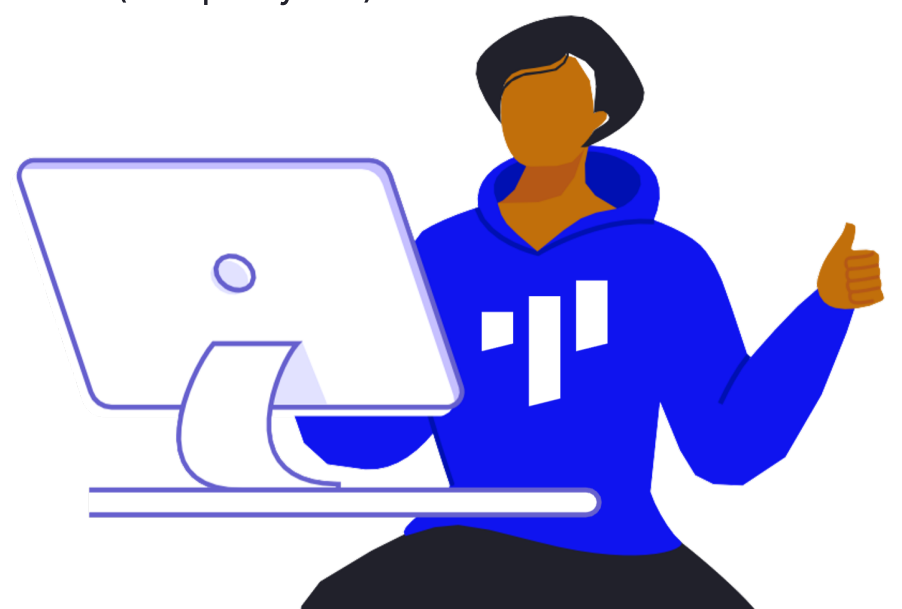

What Trever offers

We offer flexible working options in terms of time (a minimum 30h per week) and location. We have created an environment that both inspires and challenges our team members to embrace their passion for learning. At Trever, we are convinced that our team is our strongest asset and we will encourage your growth and professional development from the very start of your career with us.

Salary ranges between € 3.500 and € 5.000 per month (14x per year) for full-time.

Let's build tomorrow's financial trading system - together!

If you are interested in following this path together with Trever, please send your application documents to career@trever.io (Benjamin Rath). We look forward to hearing from you!

Backend Software Engineer (m/f/d)

GoLang / AWS

Trever is hiring!

We believe that the future of tradable assets is digital. As a growing software company from Graz, we build a regulatory conform Digital Asset Management System for financial institutions. Our customers are banks and brokers who follow the rapidly growing interest in digital asset trading. Together with our ambitious team, you can influence our mission with your skills and ideas. We are growing! Grow with us!

The work you will do

You will further develop our SaaS product in an agile environment and design new features, advanced integrations and reliable DevOps solutions. By using modern cloud technologies and the full power of Kubernetes and Amazon Web Services, you proactively stay on the cutting edge of technological innovation. You are in contact with other engineering colleagues, define interfaces between the products and also instrument applications.

Our backend stack

GoLang, Gin, gRPC, Kubernetes (EKS), Postgres, DynamoDB, Kafka, Redis, CDK, GitLab

Who you are

You have more than two years of experience in professional software engineering in an agile environment. Complex challenges spark your inventive and creative talent. You are willing to extend your skills in writing clean and maintainable code in a high performance distributed system. Overall, you are self-motivated to learn, and have strong communication and collaboration skills.

Quality Assurance Engineer (m/f/d)

GoLang / Vue.js / AWS

We believe that the future of tradable assets is digital. As a growing software company from Graz, we build a regulatory conform Digital Asset Management System for financial institutions. Our customers are banks and brokers who follow the rapidly growing interest in digital asset trading. Together with our ambitious team, you can influence our mission with your skills and ideas. We are growing! Grow with us!

The work you will do

You will create an overall quality assurance policy for our SaaS product and implement this in our organisation. By leveraging the newest technologies and the full power of AWS and GoLang, you will write all kinds of automated tests, e.g., unit tests, integration tests, and regression tests. Also, release-cycle management, end-to-end tests, and smoke tests are topics you will improve to satisfy the quality standards of digital banking. Of course, we want to get rid of toil work, but some processes are currently manually tested, so you also have to perform this.

Our stack

GoLang, gRPC, Kubernetes (EKS), Postgres, DynamoDB, Kafka, Redis, CDK, GitLab, Vue 3

Who you are

You have more than two years of experience in professional software quality assurance in an agile environment. Complex challenges spark your inventive and creative talent. You are willing to extend your skills in writing clean and maintainable tests. A seamless user experience and high-quality standards are part of your core values for software products. Overall, you are self-motivated to learn and have strong communication and collaboration skills.
